Innovative Ideas; Ideal Solutions

**King** ● ● ● ●  
Communications & Security Ltd

## Moving with technology

New technology allows us to integrate systems together, creating more reliable and cost effective solutions for businesses.

More than ever IP networks are being utilised for security and communications systems such as CCTV, Access Control, Telephony and TV.

King Communication is at the forefront of converged solutions. We can design, install and maintain complex systems based on IP components that offer unparalleled flexibility and scalability.

We can also integrate traditional systems such as Fire alarms, Intruder Alarms and Nurse Call Systems providing an end-to-end system in one, easy, single transaction.

*"We provide the technology and expertise, you just use it!"*

**[ Better solutions for businesses ]**

## Commitment to Service

King Communications strives to provide dedicated service to its customers, including:

- Consultancy
- Design
- Installation
- Maintenance

Our services aim to meet the needs of a variety of customers, from:

- Homeowners
- SME to Large Businesses
- Public Sector Organisations
- Nurse and Care Organisations

With an eye for new technology, the innovative attitude of King Communications and Security, coupled with 25 years of experience, is guaranteed to provide you with the solution you need.

Furthermore, with the accreditation received from SSAIB, King Communications and Security can issue site certificates on completion of work on CCTV, Intruder Alarms and Access Control that guarantee our clients accredited installations valid for insurance purposes.

Should you require any further information regarding anything mentioned in this brochure, you can do so by visiting:

# Security

# Security

Security has become increasingly important for both business and homeowners since the unprecedented rise in terrorist threat, anti-social behaviour and vandalism over the past few years.

With advances in technology the latest hot topic is 'Convergence' which is the integration of systems such as

- CCTV
- Access Control
- Fire
- Data and Telecommunications

The results of this are a cost effective, scalable and flexible solution with reliability and security at the core. By its very nature this provides a much greater level of future proofing than traditional solutions.

## Who is SSAIB?\*

SSAIB is a specialist Certification Body for providers of electronic security systems, fire detection and alarm systems and guarding security services.

## SSAIB Role

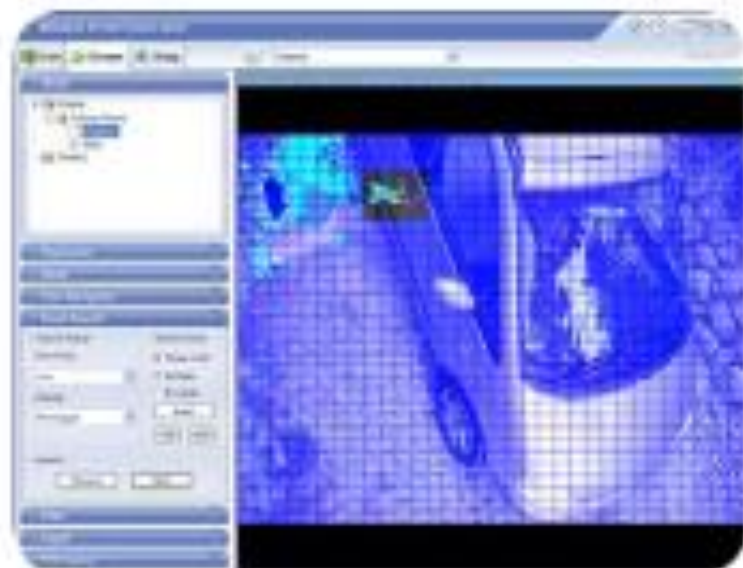

To ensure high standards of service and business ethics within the community of security, guarding and fire service providers in the interests of end users. This is achieved through rigorous assessment of providers against SSAIB's scheme criteria and maintained by regular and ongoing audit of management systems and inspection of installation.

We participate in the development of standards and regulations to ensure that they are current and workable, whilst also maintaining close liaison with the Police, Fire Services and Insurance industry to ensure ongoing support for our activities. SSAIB has wide UKAS accreditation, which means that our approach is subject to independent scrutiny and validation against international standards.

[ 24 hr protection ]

## CCTV Systems

CCTV is now available in many different complexities and technologies from traditional recording systems to offsite monitoring and IP based systems.

## IP Based Network CCTV

This is a more modern approach to CCTV utilising LAN infrastructure rather than dedicated cabling. This allows greater flexibility for future growth and provides a purely digital approach and added intelligence with many additional features and advantages over traditional systems.

## Monitored CCTV

Off site monitoring is now cost effective providing 24 hr protection to buildings and staff. The monitoring station can receive instant alerts from a remote site through the CCTV system and can then view live images and take appropriate action. Extremely effective where building perimeter protection is required and staff well being is threatened.

**We offer maintenance contracts with a 24 hour, 7 day a week call out service for your added guarantee!**

## Intruder Alarm

We can design and install Intruder Alarm systems to the most complex British Standard installation. We have a wealth of knowledge providing bespoke cost effective Alarms Systems for all types of build (industrial, commercial, retail, public sector and private homes).

We can also integrate Intruder Alarm Systems to monitored CCTV providing a combined secure stem covering the perimeter and interior of any building including Control Room monitoring.

## Fire Alarm

We can offer a portfolio of Fire Alarm technology providing a complete solution to your fire protection need whether a new build or upgrade to existing premises.

We can take this from the design and requirements stage through to the installation and maintenance of the system. In addition to this we can offer integration of the fire technology into a CCTV solution.

## Access Control

We can design and install an Access Control System that will enhance the security of any building and help protect & secure the staff. Again we can integrate this into a CCTV solution to ensure that any evidence is captured. There is a full portfolio of different types and levels of this system, which we can implement depending on the security requirement.

**[ 24 hour, 7 day a week call out service ]**

A blurred photograph of three business professionals in dark suits walking on an escalator. The woman on the left is looking down at a device in her hands. The man in the middle is talking on a mobile phone. The man on the right is looking forward. The background shows the curved structure of the escalator.

## **Telecomm's and Communications**

**Solutions specifically designed  
with everybody in mind**

## Business Telecommunications

We are expert in design and installation of business telephone systems from small business to sophisticated large scale systems including teleworking. Our full range of systems can incorporate advanced features such as Voice Over IP, Call Forwarding, Hunting Groups, Voice Mail and Call Attendant.

## Save Money on Call Charges

Using our many years experience we can advise and help our clients make vast savings on call charges and other telephony expenses. This includes Local rate, National and International calls.

## Voice Call Recording

We can supply Digital Voice Call Recording from single telephone to multi-line and multi-site operations. In any cases this can be used as evidence to prevent or collaborate any potential litigation.

## Public Address

We can offer public address solutions from small PA to full voice evacuation systems. These cover any facility and can include possible usage such as Emergency, Public Address, Communication or Professional Audio.

## Data Cabling

We can design and install Cat 5 and Cat 6 network cabling system whether it is a new build or refurbishment of an existing premises. We can also provide the network hubs, patch panels and rack mount cabinets for easy integration into computer & telephony networks.

## TV Aerial Systems & Hotel IP TV

We design & install TV Aerial distribution systems for all types of buildings including new build & refurbishment. We are also now installing Hotel IP TV systems running communal TV over network infrastructure rather than dedicated cabling.

**Nurse and Care**

## Nurse Call

We can provide a range of Nurse Call systems including both radio and

hard wired systems for any size of nursing home. These systems help to ensure the safety and care of residents.

In addition to care homes, these types of systems are now being applied in other safety conscious areas such as swimming pools.

## Warden Call

Like nurse call systems, warden call provides an emergency call facility

for the elderly or infirm in sheltered accommodation. Calls can be answered locally on site, by a mobile warden or a remote control centre. We can provide products and installation of systems that ensures the safety and ongoing care in these facilities.

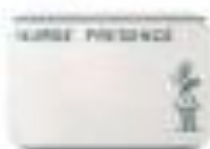

## Patient Call

We supply and install a range of patient call systems for use in

waiting areas. These range from simple call units with light up signs, to full blown digital systems with many advanced features.

## Dispersed Alarms

These types of devices provide an emergency call facility for the elderly or infirm in their own home. A call can be made to a control centre or relative at the press of a button. Again we can supply and install these types of devices.

## Induction Loop

We supply and install either permanent or portable Induction Loop systems for the hard of hearing.

## Our full safety and security package.

We can design for you the safety and security systems that provide the framework of the Care Home allowing nursing staff to perform their duties without any worry.

*Systems Include:*

- Nurse Call Systems
- Fire Alarm Systems
- Panic Attack Systems
- Wander Solutions
- CCTV
- Access Control
- Telecommunications and Data
- TV Aerial and Satellite Systems
- Maintenance Contracts
